IN THE SPECIFICATION:

Please amend the paragraph beginning at page 7 line 18 as follows:

In order to set up a direct call, the client preferably ~~transmit~~ <u>transmits</u> the memory address (in short: address) of its target function to the server. For this purpose, the client uses the inter-task communication of the operating systems. At runtime, the server has the job ~~toexecute~~ <u>to execute</u> the direct call. The interaction between client and server is shown in Figure 5 of the drawings.
